Sashank Badri Narayan

M.S. Computer Science • AI/ML Engineer • LLM Systems & ML Infrastructure
bsashank2710@gmail.com • (929) 877-4795 • github.com/bsashank2710 • linkedin.com/in/bsashank

EDUCATION

New York University (NYU) Sep 2024 – May 2026
M.S. Computer Science (May 2026) GPA: 3.53/4.00
Coursework: Machine Learning, Deep Learning, NLP, Distributed Systems, Large-Scale System Design, Cloud Computing

SRM Institute of Science and Technology Sep 2020 – Jul 2024
B.Tech. Computer Science GPA: 3.80/4.00

TECHNICAL SKILLS

Languages: Python, Go, C++, SQL, JavaScript/TypeScript
AI/ML & GenAI: LLMs (GPT-4, LLaMA, BERT), RAG, Prompt Engineering, Fine-Tuning, NLP, Anomaly Detection, MLOps
Frameworks: PyTorch, TensorFlow, HuggingFace Transformers, LangChain, TensorRT, ONNX, MLflow, Scikit-learn
Cloud & Infra: AWS (SageMaker, EC2, S3), GCP (Vertex AI, GKE), Docker, Kubernetes, Redis, PostgreSQL, Git

EXPERIENCE

ML Engineering Intern • ODStudio May 2025 – Aug 2025
- Achieved sub-200ms P95 latency serving 50K+ daily LLM inference requests by building and optimizing production Python/C++ model deployment pipelines on Kubernetes with auto-scaling
- Improved ML infrastructure throughput by 3.2× by applying TensorRT/ONNX model optimization and reducing data processing pipeline runtime by 60% through vectorized batch operations
- Accelerated model quality feedback by building a multi-modal evaluation framework for text-to-image generation, enabling systematic regression testing across model versions

Founder & CEO • HowdyDoo (Event Management Startup) Sep 2023 – Dec 2023
- Increased user engagement by 40% by building and deploying an LLM-based recommendation engine with personalized content matching using NLP classification on 5,000+ user profiles
- Reduced event setup time by 40% by designing GenAI-powered automation modules for workflow orchestration, content categorization, and operational task prioritization
- Improved platform reliability to 99.9% uptime across 25+ live events by deploying distributed backend services with load balancing and real-time anomaly alerting

GenAI Research Intern • Softcons Dec 2023 – Feb 2024
- Improved LLM text generation quality by 15% by fine-tuning LLaMA and GPT models on domain-specific datasets using systematic prompt engineering and evaluation frameworks
- Reduced model drift and quality regressions by building RAG pipelines and production LLM monitoring infrastructure tracking latency, performance, and bias across distributed systems
- Accelerated ML debugging cycles by developing model evaluation tooling to isolate data quality impacts on inference quality and classify performance degradation root causes

ML Infrastructure Intern • ODStudio Jan 2023 – Mar 2023
- Achieved 92% mAP on object detection tasks by building and training Large Vision Models using distributed computing infrastructure across 50K+ annotated images
- Reduced model deployment time by building ML infrastructure for training, evaluation, and deployment pipelines using MLflow/Kubeflow with automated CI/CD integration
- Improved model interpretability by developing SHAP and Grad-CAM explainability tooling enabling stakeholders to audit and validate model behavior in production

Software Developer Intern • Tatva Enterprises, Hyderabad Jun 2022 – Aug 2022
- Reduced delivery costs by 25% across 50+ routes by designing ML-based route optimization algorithms processing 1M+ logistics records using Python and Spark feature engineering pipelines
- Improved inventory availability by 20% by deploying demand forecasting models integrated into production supply chain workflows serving 100+ distributors
- Supported $180K+ annual revenue by building scalable REST API services for ML prediction serving with 99.9% uptime and reliable data validation

KEY PROJECTS

LLM-Powered Code Review Assistant 2025
Automated 70% of pull request reviews by integrating GPT-4 APIs into CI/CD workflows with static analysis and structured feedback generation, reducing review cycle time by 45%. (Python, FastAPI, LangChain)

AI-Driven Incident Triage System 2024
Built NLP and anomaly detection models over system logs to automate root-cause analysis and severity classification, reducing MTTR by 40%. (Python, TensorFlow, Elasticsearch, Prometheus)

Multi-Region API Gateway for ML Serving 2025
Designed high-throughput inference gateway handling 10K+ RPS with Redis rate limiting, JWT auth, and regional failover on Kubernetes for low-latency model serving. (Go, Redis, Kubernetes)

Realtime CI/CD Metrics Dashboard 2024
Built ML-augmented telemetry pipeline exposing model performance regressions and deployment health across microservices, adopted by 3 engineering teams. (React, GraphQL, D3.js, Docker)
