EDUCATION

New York University (NYU) Sep 2024 – May 2026
M.S. Computer Science (May 2026) GPA: 3.53/4.00
Coursework: Distributed Systems, Cloud Computing, Operating Systems, Algorithms, Systems Design

SRM Institute of Science and Technology Sep 2020 – Jul 2024
B.Tech. Computer Science GPA: 3.80/4.00

TECHNICAL SKILLS

Languages: Go, Python, C++, Bash, SQL, JavaScript/TypeScript
Cloud Platforms: AWS (EC2, Lambda, S3, VPC, IAM, EKS, CloudWatch), GCP (GKE, Vertex AI, BigQuery)
DevOps & Infra: Kubernetes, Docker, Terraform, CI/CD Pipelines, Helm, Linux/Unix, Bash Scripting, IaC
Observability: Prometheus, Grafana, ELK Stack, Splunk, Distributed Tracing, Alerting Pipelines
Databases & Messaging: PostgreSQL, Redis, Apache Kafka, REST APIs, gRPC, Microservices

EXPERIENCE

Software Development Engineer Intern • ODStudio Jun 2025 – Aug 2025
- Achieved 99.9% uptime and sub-200ms P99 latency for 10K+ daily event pipelines by deploying Dockerized Go/C++ microservices on Kubernetes with horizontal auto-scaling and health-check probes
- Reduced infrastructure misconfigurations by 50% by automating firewall audits, packet-integrity checks, and environment validation using Python and Bash CI/CD scripts
- Improved platform observability by 35% by instrumenting Linux services with Prometheus metrics capturing CPU, memory, latency distributions, and error states across distributed microservices

Founder & CEO • HowdyDoo (Event Management Startup) Sep 2023 – Dec 2023
- Maintained 99.9% uptime across 25+ high-traffic live events by architecting fault-tolerant AWS infrastructure with load balancing, auto-scaling groups, and proactive capacity monitoring
- Reduced operational overhead by 40% by automating infrastructure provisioning, deployment workflows, and alerting pipelines using Bash, Python, and cloud-native scheduling
- Improved incident response time by designing centralized logging, distributed tracing, and anomaly-based alerting across 5,000+ user-facing services

Blockchain Developer Intern • Softcons Dec 2023 – Feb 2024
- Sustained $100K+ in transaction volume with high availability by deploying production smart contract infrastructure with automated correctness testing and deterministic state recovery
- Reduced deployment costs by 30% by optimizing execution paths and implementing canary-release testing to validate correctness before production promotion
- Prevented $50K+ in potential downtime by conducting adversarial stress tests, identifying infrastructure failure modes, and hardening edge-case transaction scenarios

Cybersecurity Analyst Intern • ODStudio Jan 2023 – Mar 2023
- Improved cloud security posture by 65% by executing 20+ penetration tests and deploying IAM access controls, firewall hardening, and network segmentation across AWS environments
- Reduced incident response time from 4 hours to 90 minutes by building Python-based automated log triage pipelines aggregating SIEM data and routing classified alerts to on-call engineers
- Strengthened infrastructure reliability by deploying network segmentation, secure IPC patterns, and Linux configuration hardening across enterprise systems

Software Developer Intern • Tatva Enterprises, Hyderabad Jun 2022 – Aug 2022
- Supported $180K+ annual revenue by delivering a distributed logistics platform on cloud infrastructure with reliable REST APIs, RBAC authorization, and automated compliance checks
- Reduced delivery costs by 25% across 50+ routes by deploying optimization algorithms backed by real-time data pipelines integrated into cloud-hosted operational workflows
- Improved data reliability by 30% by building supply chain analytics dashboards with real-time traffic health monitoring and automated alerting for 100+ active distributors

KEY PROJECTS

Multi-Region API Gateway with Dynamic Rate Limiting 2025
Deployed high-throughput API gateway handling 10K+ RPS with JWT auth, Redis rate limiting, circuit breakers, and regional failover on Kubernetes, sustaining 99.9% uptime under burst traffic. (Go, Redis, Kubernetes, AWS)

Realtime CI/CD Metrics Dashboard 2024
Built observability pipeline and dashboard exposing build failures, deployment health, and P99 latency regressions across microservices; adopted by 3 engineering teams. (React, GraphQL, Prometheus, D3.js, Docker)

AI-Driven Incident Triage System 2024
Automated root-cause analysis over distributed logs and Prometheus metrics using anomaly detection, reducing MTTR by 40% and improving on-call signal-to-noise ratio. (Python, Elasticsearch, Prometheus)

On-Device Telemetry & Performance Monitoring Engine 2024
Collected high-frequency runtime metrics (latency, CPU, memory) across Linux services; reduced performance regressions by 35% by surfacing real-time alerts correlated with deployment changes. (Python, Grafana, AWS)
