Sashank Badri Narayan

M.S. Computer Science • Security Engineer • Network Forensics & Intrusion Prevention
bsashank2710@gmail.com • (929) 877-4795 • github.com/bsashank2710 • linkedin.com/in/bsashank

EDUCATION

New York University (NYU) Sep 2024 – May 2026
M.S. Computer Science (May 2026) GPA: 3.53/4.00
Coursework: Computer Networks, Information Security & Privacy, Applied Cryptography, Distributed Systems, Operating Systems

SRM Institute of Science and Technology Sep 2020 – Jul 2024
B.Tech. Computer Science GPA: 3.80/4.00

TECHNICAL SKILLS

Languages: C, C++, Python, Go, Bash, SQL
Networking: TCP/IP, UDP, HTTP/HTTPS, SSL/TLS, DNS, BGP, OSPF, WebSocket, gRPC, VPN, ICMP
Security: IPS/IDS, DPI Engines, Protocol Decoding, Network Forensics, Threat Analysis, Firewall Automation, SIEM, Pen Testing
Tools: Wireshark, tcpdump, PCAP, Snort, Suricata, Cisco ISE, Palo Alto Panorama, Splunk, ELK Stack, Nmap, Metasploit
Platforms: Linux/Unix, AWS (EC2, VPC, IAM), Docker, Kubernetes, Git

EXPERIENCE

Security Engineering Intern • ODStudio May 2025 – Aug 2025
- Detected 300+ network anomalies weekly by engineering C++ IPS components for high-volume API traffic using Redis stream classifiers with packet parsing and protocol inspection for HTTP/TCP flows
- Reduced network misconfigurations by 50% by automating firewall audits and L3/L4 packet-integrity checks across staging environments using Python orchestration scripts
- Improved exploit detection precision by 28% by tuning Suricata-style signatures and adaptive traffic thresholds, lowering false positives while maintaining high-throughput detection coverage

Founder & CEO • HowdyDoo (Event Management Startup) Sep 2023 – Dec 2023
- Maintained 99.9% uptime across 25+ high-traffic live events by executing real-time incident response, monitoring traffic spikes, and preventing DDoS-related service downtime
- Reduced security incidents by 40% by authoring post-incident reviews and technical runbooks standardizing detection, containment, and remediation workflows
- Improved platform reliability by 45% by developing DevOps pipelines in Python and Bash automating provisioning, log aggregation, and alert routing

Blockchain Security Intern • Softcons Dec 2023 – Feb 2024
- Identified 50+ malicious transaction signatures per quarter by architecting C++ packet sniffers for mempool and EVM traffic with PCAP forensic capture and protocol-layer behavioral analysis
- Mitigated fraudulent transaction attempts by 40% by implementing protocol-layer rate-limiting controls and deploying targeted remediation based on exploit-path tracing
- Reduced forensic investigation MTTR by 33% by streamlining packet correlation pipelines and drafting technical threat advisories for engineering teams

Cybersecurity Analyst Intern • ODStudio Jan 2023 – Mar 2023
- Uncovered critical enterprise vulnerabilities across 20+ OWASP Top 10 penetration tests using Metasploit, Nmap, and Wireshark with documented remediation actions for each finding
- Reduced SOC incident response time from 4 hours to 90 minutes by engineering a Python-based log aggregation pipeline automating SIEM data triage and alert classification
- Improved security posture by 65% by deploying firewall hardening, access controls, and protocol enforcement across Linux-based enterprise systems

Software Developer Intern • Tatva Enterprises, Hyderabad Jun 2022 – Aug 2022
- Reduced unauthorized access attempts by 22% by building secure REST endpoints with RBAC, checksum validation, and network compliance checks across 50+ distributor networks
- Improved data reliability by 30% by implementing traffic health monitoring and automated alerting for anomalous patterns in distributed logistics workflows
- Supported $180K+ annual revenue by delivering a secure logistics platform with consistent availability and data integrity guarantees

KEY PROJECTS

Intrusion Prevention System Module 2025
Engineered a C++ DPI engine for TCP/HTTP/SSL with Suricata-style rule sets and PCAP replay harnesses; improved detection accuracy 34% and lifted throughput 2.3× via multi-threaded packet processing. (C++, Wireshark, tcpdump)

Threat Intelligence Aggregator 2025
Correlated IoCs with real-time DNS/HTTP/SSL flows and Suricata alerts; reduced alert fatigue 20% through adaptive thresholds and cut SOC triage time 35% with attack-path visualizations. (ELK, Splunk)

AI-Driven Security Incident Triage System 2024
Built ML-driven anomaly detection over IDS logs with DNS/HTTP/TLS signal correlation to surface root causes and lateral movement paths, reducing MTTR by 40%. (Python, ELK)

Network Access Control 2024
Implemented enterprise network segmentation with MAC-based authorization on Cisco ISE (RADIUS/802.1X); detected 70+ rogue logins/month and improved endpoint compliance by 25%. (Cisco ISE)
