Sashank Badri Narayan

M.S. Computer Science • Data Scientist & Machine Learning Engineer
bsashank2710@gmail.com • (929) 877-4795 • github.com/bsashank2710 • linkedin.com/in/bsashank

EDUCATION

New York University (NYU) Sep 2024 – May 2026
M.S. Computer Science (May 2026) GPA: 3.53/4.00
Coursework: Machine Learning, Statistical Methods, Big Data Analytics, NLP, Predictive Modeling, AI, Bioinformatics & AGI

SRM Institute of Science and Technology Sep 2020 – Jul 2024
B.Tech. Computer Science GPA: 3.80/4.00

TECHNICAL SKILLS

Languages: Python, R, SQL, Go, JavaScript, Bash
Data Science & ML: Machine Learning, Deep Learning, NLP, Statistical Modeling, A/B Testing, Predictive Analytics, Anomaly Detection
Frameworks: TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, PySpark, Hadoop, Spark MLlib
Cloud & Tools: AWS (S3, Lambda, SageMaker, EMR), GCP, Docker, Kubernetes, PostgreSQL, Tableau, Power BI, Git

EXPERIENCE

Data Science Intern • ODStudio Jun 2025 – Aug 2025
- Reduced campaign false positives by 30% and improved targeting precision by 25% by processing 2M+ daily rows in PySpark and deploying Z-score/IQR-based anomaly detection models to a Segment pipeline
- Drove an 18% improvement in click-through rates by designing and evaluating A/B tested recommendation algorithms with business partners and PM stakeholders
- Cut manual reporting time by 50% by building automated Python ETL pipelines to ingest, transform, and surface data-driven insights from 10K+ daily event streams

Founder & CEO • HowdyDoo (Event Management Startup) Sep 2023 – Dec 2023
- Increased event revenue by 22% by applying A/B testing and hypothesis testing to evaluate dynamic ticket pricing strategies on 1.5M+ historical transaction records
- Reduced manual reporting time by 50% by building automated Python/Pandas dashboards presenting statistical KPIs and attendance visualizations to stakeholders
- Optimized operations across 25+ events by analyzing 500K+ user interactions via SQL and predictive models to proactively surface capacity and reliability risks

Data Analyst Intern • Softcons Dec 2023 – Feb 2024
- Reduced inventory mismatch by 15% by building predictive demand models (Isolation Forest, DBSCAN) on 800K+ rows of blockchain transaction data using SQL and Python
- Improved platform security by developing automated fraud detection heuristics with anomaly scoring, identifying irregular patterns across $100K+ in transaction volume
- Enabled data-driven tokenomics decisions by translating transaction analytics into actionable insights presented to engineering and product stakeholders

Data Science Analyst Intern • ODStudio Jan 2023 – Mar 2023
- Classified threat patterns with 85% accuracy by developing an automated log analysis framework processing 3M+ daily security records using logistic regression and decision trees
- Reduced incident response time by 40% by building automated triage pipelines that filtered and prioritized 1M+ vulnerability scan results via risk-based scoring
- Accelerated forensic investigation by processing 500GB+ of PCAP data through structured Python pipelines, cutting analyst MTTR from 4 hours to 90 minutes

Data Analyst Intern • Tatva Enterprises, Hyderabad Jun 2022 – Aug 2022
- Reduced delivery costs by 25% across 50+ routes by processing 1.2M+ logistics records using SQL and Python to develop data-driven route optimization models
- Improved inventory availability by 20% by deploying time-series forecasting models integrated into operational supply chain decision workflows
- Served 100+ stakeholders by building automated SQL analytics dashboards with data quality checks that resolved errors impacting business decisions

KEY PROJECTS

Automated System Error Analysis Pipeline 2024
Built a pipeline processing 5M+ daily log records on Hadoop/PySpark using NLP and anomaly detection to identify system error root causes, reducing MTTR by 40%. (PySpark, Hadoop, Python)

Customer Churn Prediction at Scale 2024
End-to-end ML pipeline on 2M+ customer records using XGBoost and Spark SQL with automated feature engineering; achieved 80% accuracy and reduced SaaS churn by 15%. (XGBoost, Spark, SQL)

AI-Driven Incident Triage System 2024
Developed NLP and anomaly detection models over system logs to automate root-cause classification, cutting MTTR by 40%. (Python, TensorFlow, Elasticsearch)

Large-Scale Recommendation System 2023
Built collaborative filtering on 1M+ interaction records using Spark MLlib; automated training pipeline and A/B testing demonstrated 12% engagement lift. (Spark MLlib, Python)
