Sashank Badri Narayan

M.S. Computer Science • Software Engineer & Backend Developer
bsashank2710@gmail.com • (929) 877-4795 • github.com/bsashank2710 • linkedin.com/in/bsashank

EDUCATION

New York University (NYU) Sep 2024 – May 2026
M.S. Computer Science (May 2026) GPA: 3.53/4.00
Coursework: Distributed Systems, Algorithms, Operating Systems, Systems Design, Cloud Computing

SRM Institute of Science and Technology Sep 2020 – Jul 2024
B.Tech. Computer Science GPA: 3.80/4.00

TECHNICAL SKILLS

Languages: Python, Go (Golang), C++, JavaScript/TypeScript, SQL, Bash
Backend & Systems: REST APIs, Microservices, Node.js, FastAPI, Distributed Systems, Event-Driven Architecture
Cloud & Infra: AWS (EC2, Lambda, S3), GCP, Docker, Kubernetes, Redis, PostgreSQL, CI/CD Pipelines
Tools: Git, Linux/Unix, Prometheus, GraphQL, React

EXPERIENCE

Software Development Engineer Intern • ODStudio Jun 2025 – Aug 2025
- Sustained 99.9% uptime and sub-200ms P99 latency for 10K+ daily event pipelines by deploying Go/C++ microservices on Kubernetes with Redis-backed coordination and horizontal auto-scaling
- Reduced tail latency by 22% by profiling C++ execution paths, optimizing caching strategies, and instrumenting Linux runtimes to capture latency, jitter, and error-state metrics
- Improved developer observability by 35% by building distributed telemetry pipelines capturing throughput and failure signals across containerized services

Founder & CEO • HowdyDoo (Event Management Startup) Sep 2023 – Dec 2023
- Scaled platform to 5,000+ users across 25+ live events by architecting backend services for ticketing, attendance tracking, and access validation under peak-traffic load
- Reduced operational overhead by 40% by building automated workflow pipelines for event scheduling, coordination, and resource management
- Maintained system reliability under concurrent load by designing fault-tolerant microservices with centralized monitoring and incident alerting

Blockchain Developer Intern • Softcons Dec 2023 – Feb 2024
- Secured $100K+ in transaction volume by developing production Solidity smart contract systems with cryptographic validation and deterministic execution guarantees
- Reduced transaction costs by 30% by optimizing gas usage and execution paths while preserving correctness under concurrent smart contract interactions
- Prevented $50K+ in potential vulnerabilities by conducting adversarial security audits and stress-testing contract logic against edge cases and failure scenarios

Cybersecurity Analyst Intern • ODStudio Jan 2023 – Mar 2023
- Reduced incident response time from 4 hours to 90 minutes by engineering Python-based threat detection pipelines automating log triage, alert classification, and SOC signal routing
- Improved security posture by 65% by executing 20+ penetration tests using Metasploit and Nmap and implementing targeted firewall hardening configurations
- Strengthened system reliability by deploying access controls, secure IPC patterns, and Linux configuration hardening across enterprise environments

Software Developer Intern • Tatva Enterprises, Hyderabad Jun 2022 – Aug 2022
- Supported $180K+ annual revenue by building a FMCG logistics platform with secure REST APIs, RBAC authorization, and checksum validation across 50+ distributor networks
- Reduced delivery costs by 25% across 50+ routes by implementing inventory tracking and route optimization algorithms serving real-time operational decisions
- Improved data reliability by 30% by delivering supply chain analytics dashboards consumed by 100+ distributors and retail partners

KEY PROJECTS

Multi-Region API Gateway 2025
Designed a high-throughput gateway handling 10K+ RPS with JWT auth, Redis rate limiting, circuit breakers, and regional failover on Kubernetes at 99.9% uptime. (Go, Redis, Kubernetes)

LLM-Powered Code Review Assistant 2025
Automated 70% of pull request reviews by integrating OpenAI APIs into CI/CD workflows with static analysis and structured improvement feedback, cutting review cycles by 45%. (Python, FastAPI, TypeScript)

Realtime CI/CD Metrics Dashboard 2024
Built a telemetry pipeline and visualization layer exposing build failures and deployment health across microservices; adopted by 3 engineering teams. (React, GraphQL, D3.js, Docker)

AI-Driven Incident Triage System 2024
Developed anomaly detection over structured logs and metrics to automate root-cause analysis, reducing MTTR by 40%. (Python, Elasticsearch, Prometheus)

CERTIFICATIONS

Cisco CCNA • Palo Alto PCNSE • Stanford Machine Learning Specialization (Andrew Ng / Coursera)
